Step 1: Set up your Eclipse for Android Programming. ensure you are on latest ADT, android SDK tools and Android SDK platform and ur SDK should have minimum Android 4.0.
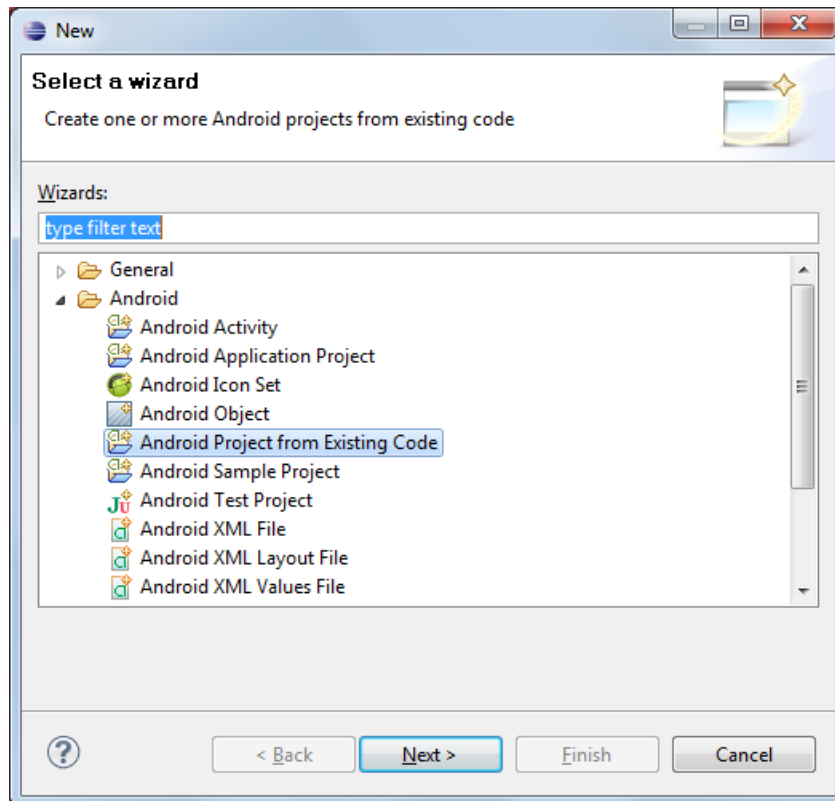

Step 2: Extract the Serious Android Developer app.rar

Step2 : Extract library2.zip and SherlockActionBar.zip in same folder.

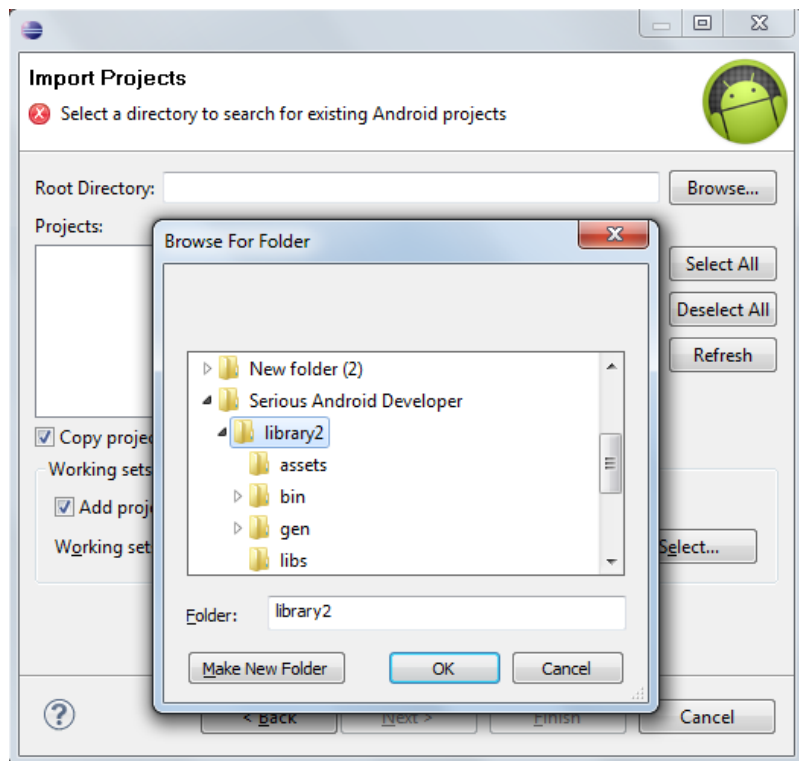

Step 3: Open Eclipse Goto File>New > Other>Android> Select Android Project from Existing Code
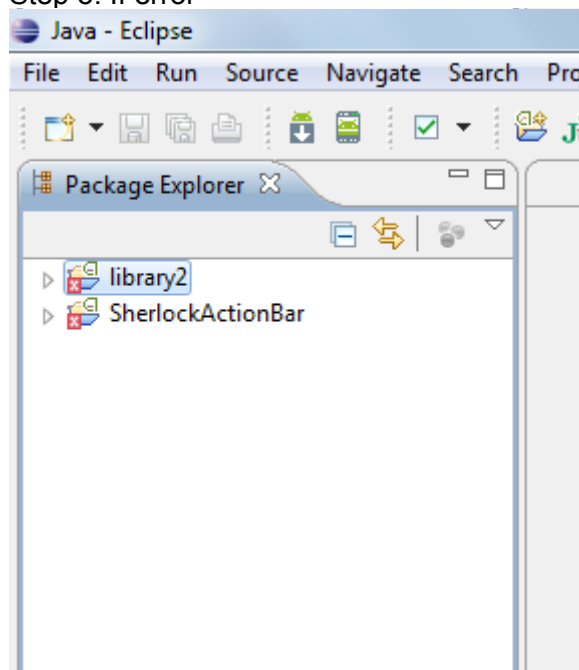

Step 4: Click on Browse and Select the SherlockActionBar folder and then press ok!
**most important Tick Copy Projects into workspace** and click on finish.
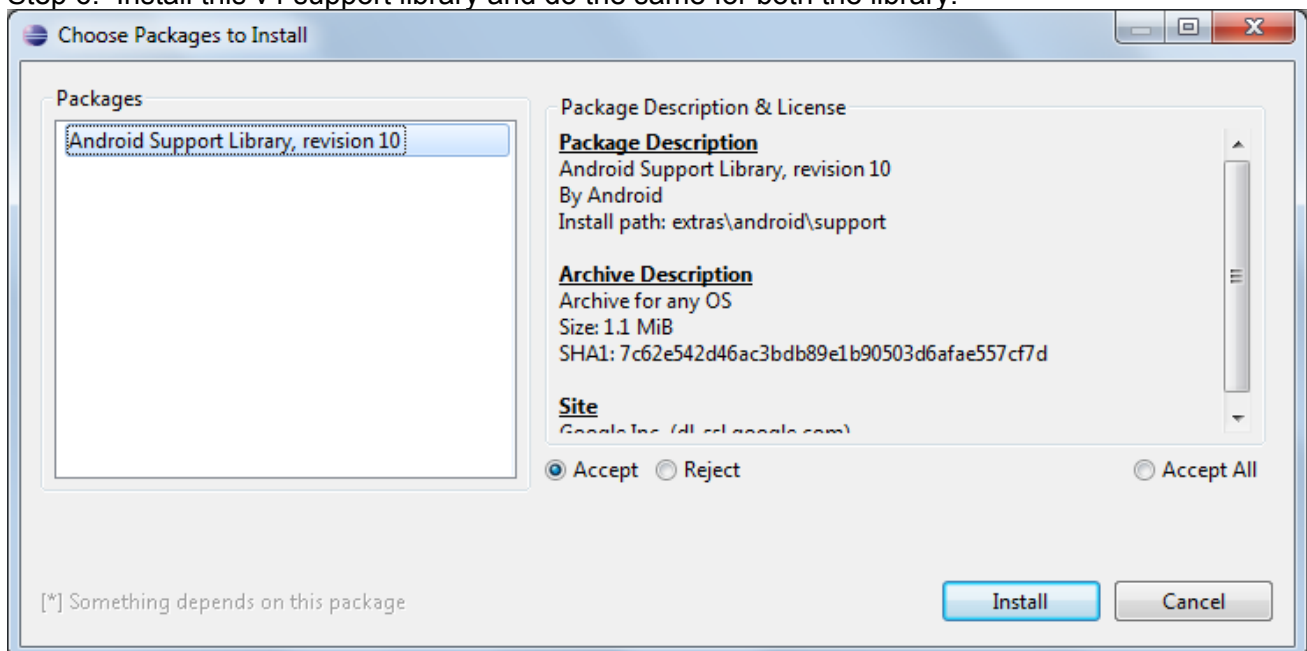

Do the above same for library2 folder.

Step 5: If error

Right Click on Project file > Android Tools > Add Support Library

Step 6: Install this v4 support library and do the same for both the library!

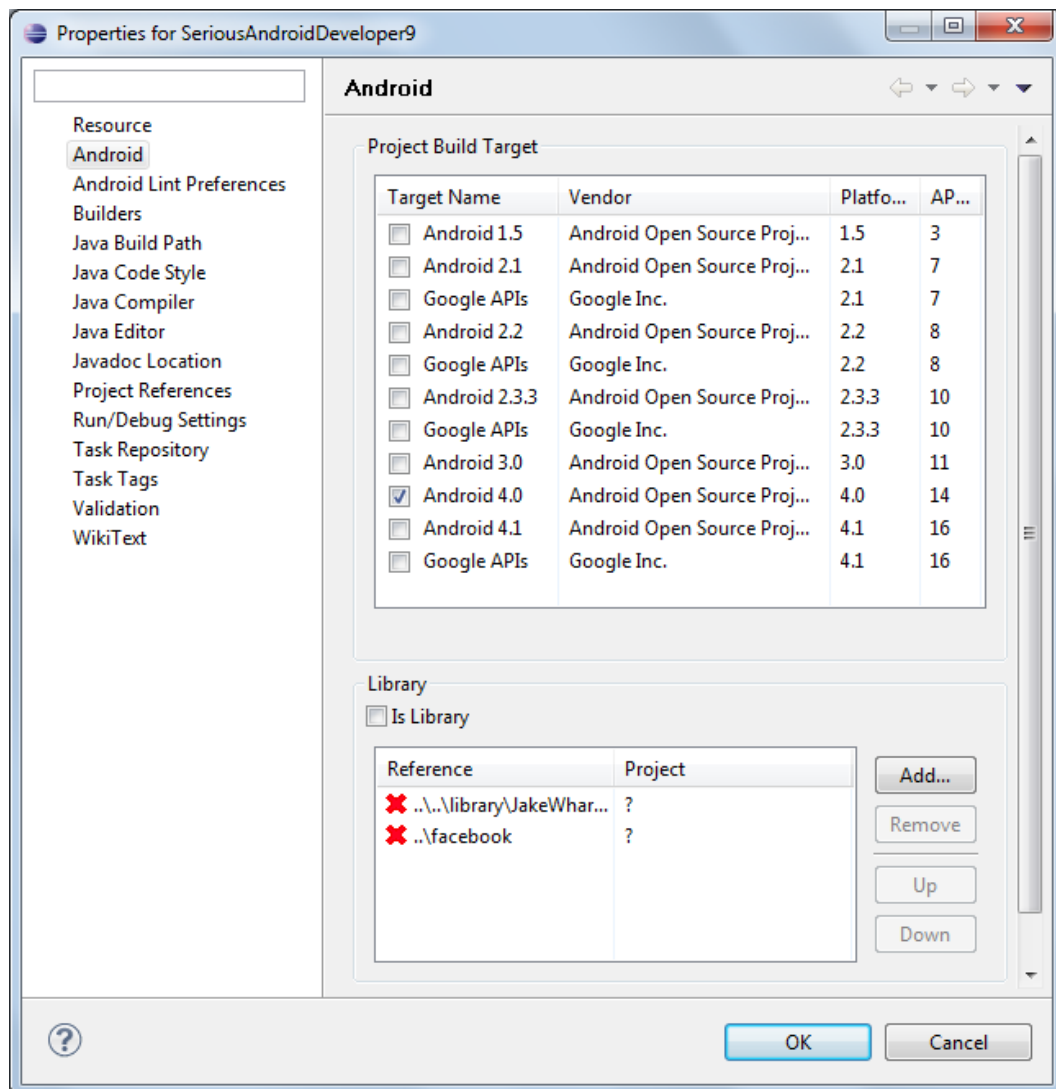

Step 7: If error still there then Right Click on project file properties>Android> Choose Project Build Target > Select Android 4.0 or higher

Your Library are ready to use. Now we import our Project file.
Step 8. In eclipse Click on File > Import > Select Existing Project in workspace
select "Select archieve file" radio button locate SeriousAndroidDeveloper9.zip file and click on finish button.
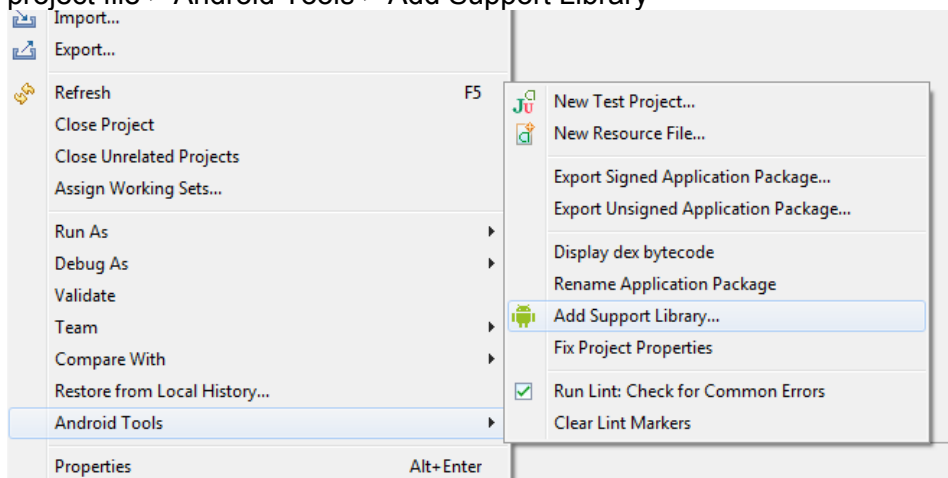

Step 9: Again Right Click on Serious Android Developer project file inside Eclipse select properties , In library section below remove the reference library.
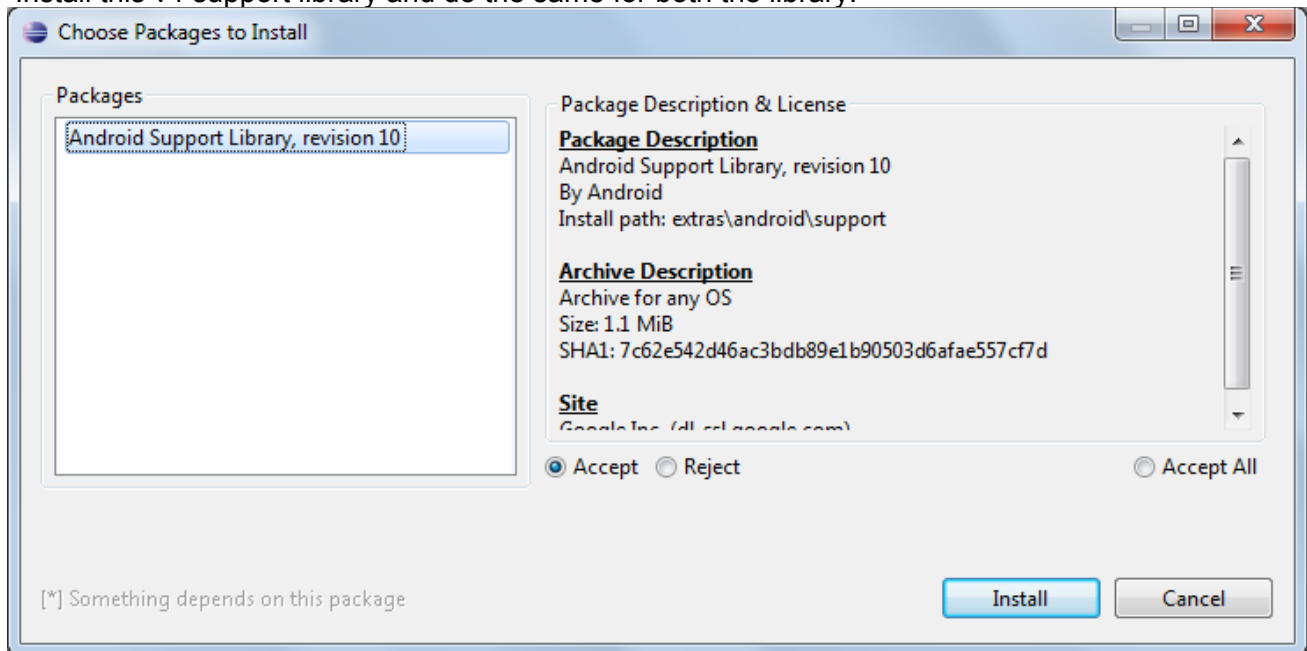

After removing the two reference library click on add following dialog box will appear add both the reference library one by one !

If error comes download the v4 Support library by right click on serious andriod developer9 project file > Android Tools > Add Support Library

Install this v4 support library and do the same for both the library!

now its ready!
